

SKYWAY legacy

As a CAGBC (Canadian Green Building Council) Member, THIND Properties is proud to join the City of Vancouver’s environmental initiatives by developing its own “THIND SIGNATURE GOLD” building standard to achieve the highest environmentally progressive standards.

Exterior window wall systems incorporates thermal properties to minimize heat loss in the winter, and maximize cooling in the summer

Appliances, hood fans and dehumidifiers are selected to meet the highest standards of energy savings without sacrificing quality

Skyway Tower has been carefully engineered to reduce energy use and provide a healthy living standard for generations to come. This is achieved by utilizing select building materials and green building ideas to help use less water and energy, and produce less waste.

Electric baseboard heating is replaced with energy efficient hot water baseboards providing quality heat and energy efficiency

All plumbing fixtures are designed to utilize water in the most efficient ways possible.

Enjoy the garden floor community deck which is designed for all the owners of Skyway Tower.

Landscaping, including a “Green Roof” and drought-tolerant plant species, will help reduce 50% of potable water for irrigation
